EXHIBIT "A"
DESCRIPTION OF SERVICES TO BE PERFORMED BY CONSULTANT

Consultant's entire Proposal is **not** made part of this Agreement.

Base Scope of Services

1. Review of District's Master Plan, related As-Built Documents, Historical Reports/ Studies, and District Standards.
2. Create a study that evaluates the current condition of each entrance. This study/assessment will be used to prioritize needs and maximize use of the project budget.
3. Create an overall assessment of the North and South entrances, including but not limited to a professional traffic study, signage (traffic and wayfinding), digital signage upgraded to current district standards, and ADA upgrades.
4. Lionakis Team is responsible for all necessary meetings with the District, Stakeholders, and District Consultants to determine the future scope of the project. Lionakis Team assumes a minimum of four (4) In-Person/ Virtual meetings with the District.
5. Lionakis Team will visit the site as necessary to become familiar with site and verify discussion input and direction.
6. Lionakis Team will provide a separate Professional Estimate for each entrance (North and South).
7. Lionakis' Team includes a Professional Traffic Consultant.
8. Lionakis Team provides a Final Report which includes the study's findings, the existing conditions assessment, traffic study, for each entrance, and a high-level schematic drawing for each Vehicular Campus Entrance. The above deliverables will be created using the following work plan:
 - a. Task 1:
 - i. Review Planning Documents —Review the District's master plan, as-built documents, historical reports and studies, and District standards. In addition to these studies, Fehr & Peers will review previously completed traffic analyses for other projects in the Cordelia area of Fairfield. Consultant will also review the in-progress materials for the City of Fairfield General Plan update, which Fehr & Peers is currently completing for the City.
 - b. Task 2:
 - i. Traffic Study & Report—The campus gateways are comprised of two sets of closely-spaced intersections. These intersections generally operate in clustered fashion, and modifications to the gateways should carefully consider how the intersections with Suisun Valley Road and the first campus intersections operate together to efficiently move vehicles, bicyclists and pedestrians.

Fehr & Peers will review available traffic count data at up to four intersections as part of this project; if intersection count data is not available, Consultant will conduct counts at four intersections once regular school resumes in late summer 2023. A site visit will be conducted to

confirm aerial observations of lane geometrics. Consultant will analyze the four intersections for Existing Conditions and Future Conditions using the Synchro 11 software package and the Highway Capacity Manual, 6th Edition methodologies to assess the traffic demand and operations at the entrances and campus gateway intersections. Deficiencies related to District and City standards will be identified. As a basis for this work, Fehr & Peers will utilize previously-approved traffic volume forecasts for the Future Conditions scenario (where available), which have been previously reviewed and approved by the City of Fairfield. Consistency with previous traffic analyses will help minimize the City traffic engineering department (presumed to be one of the City department stakeholders) comments on the traffic analysis.

Consultant will analyze up to three gateway configuration alternatives for each gateway to determine the benefits of the improvements. Based on this information, a preferred alternative will be selected by the District based on meetings and other stakeholder feedback. Bicycle and pedestrian facilities will be identified for the preferred alternative.

The work in Task 2 will be documented in a traffic study memo for inclusion into the Final Report. A draft of the memo will be submitted to the District for review.

c. Task 3:

- i. Conceptual Drawings and Estimates—Develop high-level conceptual layouts of the transportation system for the preferred alternative for the North and South gateways to campus. Consultant will develop the concepts on aerial background using AutoCAD software. The concepts will illustrate the potential geometric layout of the intersections to illustrate the footprint of the improvements for discussion purposes. Consultant will identify lane configurations/turn lanes/acceleration lanes needed. Traffic signal concepts will include potential signal pole locations. The concepts will not include grading, drainage, or utility information. Fehr & Peers will develop cost estimates for these improvements based on data from existing aerial imagery and other data provided by District staff. These cost estimates will be conceptual in nature and will be made in year 2023 dollars. Consultant will submit draft concepts for review by District staff and revise the concepts based on one round of review. It is expected that at this point, the concepts would be presented to stakeholders. This scope does not include revisions to the concepts based on stakeholder feedback.

d. Task 4:

- i. Meetings—Consultant will prepare for, and participate in, up to four in-person/virtual meetings with the District.
