Science & Veterans Center Update

With interior wall framing now in place, the labs and spaces in the new Science and Veterans Center Building are taking shape. Mechanical, electrical and plumbing distribution systems have been installed and application of gypboard wall finish is in progress.

The building exterior has received a primer and will take on its final terra cotta color as painting progresses this month. Roofing has been completed and soon the building will be fully enclosed and watertight for the winter rains. Work is beginning on site improvements around the building such as final grading, walkways, landscaping, and the large oval plaza.

Construction is scheduled to be substantially complete in January. The Veterans Center will move in over Spring Break and the Science program will take occupancy in May and June.
