Playing Audio Devices (i.e. iPod)

Note: You do not turn on the projector for this function if the Auxiliary Audio button (right side of smart panel) is present.

In addition, AV component cables are required (may not be available inside cabinet).

1. Using the AV cable, connect the left and right inputs (from your audio device) to the left and right Audio input on the smart panel (located under the Auxiliary Video component)
2. Press the Auxiliary Audio button (right side) to play the device on the speakers
3. When pressed, Auxiliary Audio button will light with a blue hue, indicating it is on
4. You can control the volume level using the volume control located in the upper right corner of the smart cabinet control panel
